

# It's about time. Yours.

We get it. Time is precious. You need an EMR that gives you the flexibility to access the information you need – when and where you need it. **TELUS EMR Mobile** is a complimentary app that lets you remotely connect to your EMR on the go from a mobile device or Internet browser.

## Convenient

- Review lab results while you're at the hospital, on a house call, in a patient consult, or at home
- Take a photo, add a comment and upload it to the patient chart directly from your phone
- Check your schedule to plan your day and assign tasks to nurses or staff based on labs results received

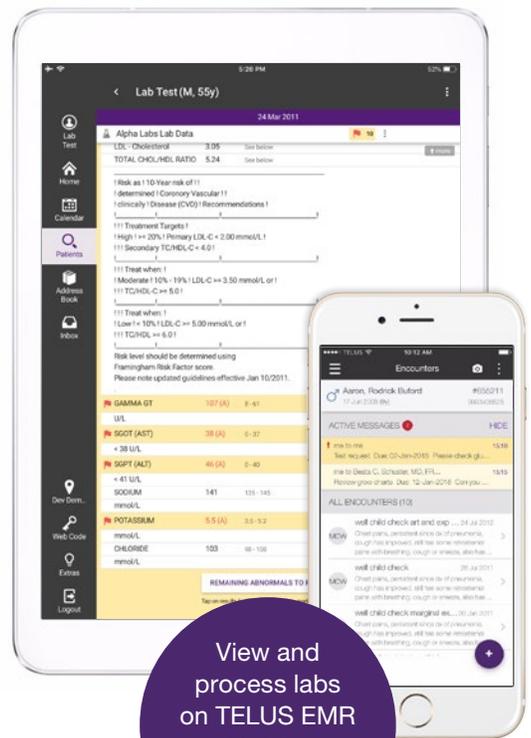

## Meaningful

- Clinically document patient conditions by capturing photos and uploading them directly to the patient's chart in the EMR
- Access your messages while at the hospital or on a house call
- View basic patient information, including health conditions, medications, and past consultations
- When reviewing labs reports, clearly see abnormal test results and mark them as reviewed

## User-friendly

- View information easily in a mobile form factor; patient health information, incoming lab results and your calendar are available at-a-glance
- Messages and tasks viewed in the mobile app appear in the same format as they do on your desktop EMR
- Conveniently use your existing mobile device (smartphone or tablet, Apple or Android)

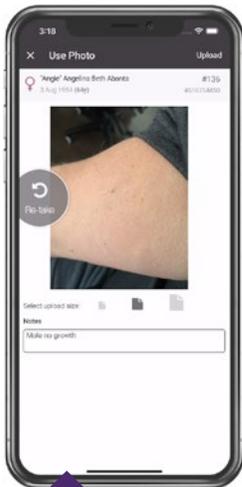

View and process labs on TELUS EMR Mobile.

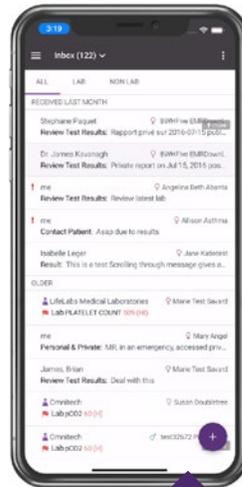

# Unlock the full potential of your practice's seamless workflow – on the go, on your smartphone or tablet.

**Quickly access** patient history, medical profiles and demographics

**Upload photos** directly to patient charts

**Address messages** and tasks that concern you

**View and process** labs results wherever you are

Download the app. Pair your device. Get mobile.
