

Med Access

Electronic medical record

Valued and well-loved by specialists and family physicians alike since 2002

Med Access at a glance

Med Access is a leading web-based, highly configurable Electronic Medical Record (EMR) solution that adapts to individual clinics, user preferences and work styles for general practitioners and specialists. Med Access has robust reporting, powerful task management and point-of-care decision support. Med Access is used across Canada in clinic settings and province-wide EMR collaboratives.

Why Med Access?

Enhance patient care

- Interactive chronic disease management through the use of graphs to track tests, review lab work and establish trends over time. Leverage graphs, charts and diagrams to illustrate the actual effects of treatment. Plus easy-to-use templates allow quick printouts during patient physical exams.
- At-a-glance design concentrates key information in a single screen, and allows users to define how and what they want to see on that screen.
- Tailored to a specialist's workflow. Filter physician-specific medication lists by indication, therapeutic class and dosage guidance.
- Manage your practice with dashboards that provide access to multiple areas of the EMR in one single screen, as well as provide different ways to view or analyze information that is actionable. Users can "drill down", displaying search results allowing deeper investigation and follow-up actions.

Improve collaboration

- Centralized electronic medical data eliminates administrative redundancies.
- Robust reporting to analyze, share, and track patient and clinic data for provincial screening and reporting purposes.

Save time and reduce costs

- Save valuable time with advanced features such as prescription management, referral management, customizable search options and group care.
- Reduce costs with streamlined billing, integrated scheduling and resource management in a single solution.
- Med Access EMR Integrated eFaxing lets you securely send and receive faxes directly from/to your EMR (coming soon).
- Create efficiencies and minimize data entry for charting observations by annotating directly within the EMR PDF record.
- Access your EMR anytime, anywhere. Upload photos directly to patient charts, quickly view patient records and encounter notes, check your schedule, directly phone a patient or access the data stored in your EMR in real-time – all from your mobile device.
- Encounter and exam templates help you streamline paperwork and other administrative tasks such as referral letters and prescriptions. Data points throughout the EMR are leveraged to save time.
- Store dynamic electronic signatures for prescriptions to allow the user to sign each prescription before faxing.
- Appointment reminder capabilities (coming soon).

Did you know?

- Topics such as adult & youth mental health, chronic pain, COPD and heart failure have been added to the Med Access template library and are accessible on your EMR today.
- The Med Access EMR has the tools needed to support physician participation with the Saskatchewan Chronic Disease Management – Quality Improvement Program (CDM-QIP) with EMR enabled tools to support patient care for diabetes, coronary artery disease, congestive heart failure and chronic obstructive pulmonary disease. Sophisticated patient visit encounters dynamically show observations and alerts depending on the patient's recorded conditions and a dashboard to support population management enables proactive recall and coordination of tasks.
- In British Columbia, a number of divisions of family practices use the Med Access referral network to send electronic patient data to coordinate care within the community. When a patient chart is sent via the referral network, the patient chart is populated and reduces the need for data entry.

Certifications

- Current or previous funding-eligible solution in B.C. (PITO-qualified), Alberta (VCUR08), Saskatchewan (SMA & PHC), Newfoundland and Ontario
- Selected as the EMR of choice by the province of Newfoundland
- Highly interoperable and providing industry-leading connectivity to data sources:
 - Provincial Billing Systems (BC, AB, SK, ON, NL)
 - Provincial Client Registries (BC, AB)
 - Provincial Provider Registries (BC, NL)
 - Provincial Pharmacy Networks (BC, AB, SK, NL)
 - Provincial Lab Systems (BC, SK, ON, NL)
 - Provincial DI Systems (ON, NL)
 - Regional Lab & DI systems (BC, AB, SK, ON, NL)
 - EMR Data import/export standards (AB, BC, ON, CHI)
 - Full eReferral (peer-to-peer) capabilities in production use
 - Canada Health Infoway National Class EMR Certification
 - ISO 13485:2003 and ISO 9001:2008 certification

“ Med Access is brilliant in its ease of use. From a familiar colour scheme throughout the program to standardized ways of managing information, the solution allows beginner users to effectively use the program very quickly. It takes literally minutes to train physicians, residents and medical office assistants to get up and running on the basics to operate the EMR.

The ability to customize the user experience and workflow is also incredible. Each of us interacts with patients in our own way, and the EMR needs to be a quiet partner in that process. Over the years, we have found outstanding customer service from Med Access. We are always impressed about how quickly critical issues are addressed. ”

Dr. Leo K.H. Wong, Family Physician, Langley

CERTIFIED 2015
Electronic Medical Record
N-Class, Pre-implementation
