

# You're busy. CHR AI-powered features can help.

Medical offices face a deluge of information. Digital recordkeeping and communication has created a significant administrative burden for healthcare practitioners and clinic staff. Fortunately, artificial intelligence (AI) tools can help alleviate this critical problem.

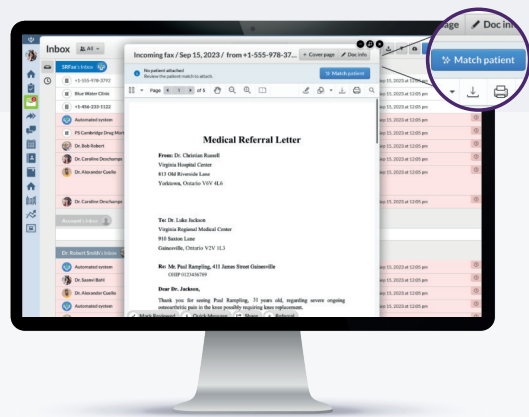

Gain clinical efficiencies and engage patients with AI-powered features in your TELUS Collaborative Health Record (CHR):

- Just one click to populate a new patient chart
- Two clicks to match patients to incoming files
- Automatic document splitting, owners assignment and file name generation
- Ambient scribe, workflow automation, and GenAI clinic letter writing (coming soon)

...All without leaving the CHR.

### We are committed to responsible AI.

At TELUS Health, we recognize the transformative potential of innovations like AI. We believe it will augment human capabilities and help deliver better patient outcomes to build a healthier future.

**We have 100% satisfaction from our first AI-enabled workflows. Can't wait for what's coming.**
