## Influenza Immunization Drug Cards – Manitoba (2021/22)

With the introduction of our Influenza Immunization module, some significant changes must be made to the drug cards for the Influenza Immunization products your pharmacy uses.

The immunization formulary you have been provided may include drug records that already exist in your system; if this is the case, duplicate drug cards will be inserted in your system. Manual changes must be made to the correct drug card to ensure the correct product is selected when documenting and billing immunizations.

It is your responsibility to ensure the values in the Influenza drug cards are set as follows and that duplicate drug cards are managed appropriately.

### Identifying Duplicate Drug Records

1. Search for an Influenza immunization drug. If there are duplicate drugs in your system, multiple records will appear in the drug search screen.

In the example below, there are three drug records in the system associated with DIN 02420643.

3	Fluzone Quadrivalent Influenza Vaccine (GOVN'T)		15mcg	1	02420643	ML (Syring	SAO (Sanofi Pasteur Limited)	

- Because last year's immunization products are recorded under a pseudo-DIN, you should also search for each of this year's products by drug name (not by DIN) and inactivate the drug cards for last year's products.

In the example below, there are two Fluviral drug records in the system. This year's product uses the correct DIN and last year's product is recorded under a pseudo-DIN.
