

PrescribelT®

Receive e-prescriptions directly from prescribers and request prescription renewals - all from within Kroll.

A powerful, national e-prescribing service offered by Canada Health Infoway.

Receive more than a prescription.

Through PrescribelT®, new patient information is directly received into your PMS along with the electronic prescription.

Request prescription renewals easily.

Spend less time phoning, faxing and entering data. Simply send prescription renewal requests directly to the prescriber's electronic medical record where the prescriber can review them and send them back to Kroll for processing.

Collaborate directly with prescribers.

As a member of the care team, you can send encrypted messages directly to the prescriber's electronic medical record to quickly clarify prescription information or collaborate on patient medication therapy.

Boost efficiency in your pharmacy - so you can focus on patient care.

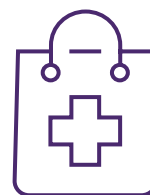

Access prescription information directly in Kroll.

Prescription details like patient information, dispense instructions, quantity and refill amount are auto-populated into Kroll. No more manual key entering of data from paper or fax is required.

Prescriptions auto-added to your queue.

E-prescriptions for all medications, including narcotics*, are received and added directly to your filling queues in Kroll for preparation and dispensing. No need to sign into a different tool or use a different account.

Manage pharmacy traffic flow.

PrescribeIT® helps to reduce waves of patients waiting for prescriptions in your pharmacy. You'll receive prescriptions in advance and can have them ready when patients arrive to pick them up.

“PrescribeIT® allows a pharmacist to be more efficient in communicating with prescribers, and ultimately makes the pharmacy workflow more efficient so we have more time for the patient.”
